# *NEW!*

ARES III WATCHMAN SYSTEM

ARESIII

- Advanced high-tech, durable, watchman system that ensures security guards are covering their rounds. Security personnel simply touches the M4000 recorder to station button, placed at each checkpoint location to record, date and time of his or her patrol.

- Data is downloaded directly to computer (Over 2000 registrations can be stored). No download computer transfer station is needed. Computer processes data and watchmen reports are generated. Flexible and expendable, allows users to add readers and stations as required.

- The M4000 is a rugged recorder made of reinforced polycarbonate and is tamper proof. Operating range is 32-120F with 0% to 95% relative humidity.

- ARESIII offers a base system without incident recording buttons for recording rounds only. The optional incident Pad w/12 iButtons© that offers up to 9,999 user programmable incidents can be used to record conditions at stations.

- System includes: M4000 Recorder with carrying case and strap, ARESIII software and manual on CD, DB9 interface cable to PC, two Guard badge buttons and 10 recording stations buttons and mounts. 3" W X 2"H X 6"L.

- Shipping weight is 4 lbs.

OPTIONS

- Additional recorder, recording stations, and incident pad available

APPLICATIONS

- Watchman: The guard uses his or her assigned "Guard Badge Button" to identify guard and to start shift by touching badge button to M4000 recorder. During the tour, carrying the M4000 the guard touches the recorder to designated "Recording Stations" registering station location (ie. Front Door, Break Room Window, etc.). The system records, along with location, date and time of round. The optional Incident Pad may also be used to define conditions at locations (Door Unlocked, Window Opened, etc.). After tour/shift the M4000 can be downloaded to PC and reports generated.

- The ARES III is an expandable watchman's tour system. Additonal Tour Recorders (M4000). Guard Badge buttons and Recording stations can be added as needed.
